To Whom It May Concern:

The KSD Group Inc. is a construction project management company based in Concord, CA. We oversee the construction of commercial and residential building projects throughout California.

West Coast Premier Construction has been our General Contractor on several seismic retrofit, tenant improvements and restoration of masonry building projects, some of which are of architectural and historic value. I have also use WCPC exclusively to do structural modifications and tenant improvement work on an office building that I personally own in Concord, California.

On 559 Clay St. San Francisco, an historic landmark four-story un-reinforced brick masonry building, WCPC restored the building facade by replicating 100 year old Carnegie glazed bricks with matching tiles cut to size in intricate patterns. Upon completion, the restored portions of the façade were impossible to differentiate from the original. WCPC was originally hired for this project for their expertise in Design/Build seismic renovations, but their ingenuity in solving the exterior façade brick restoration precluded the need to hire a costly masonry restoration subcontractor.

West Coast Premier Construction is a versatile company, their vast involvement and background, since 1992 in seismic retrofit and heavy structural work does not overshadow their attention to finish quality.

WCPC personnel work well with architects, engineers, construction managers, city inspectors, clients and tenants of the building projects they work on. They have gone out of their way as to even working graveyard shifts to minimize disturbance to the tenants and customers when buildings are occupied.

I highly recommend West Coast Premier Construction as a quality firm providing cost effective and creative construction solutions especially in the field of seismic retrofits.

Sincerely,

Ken Defiebre  
President  
KSD Group, Inc.
